

## The Ultimate File Transfer Solution for Multi-Node Heterogeneous Environments

Large organizations require constant, massive and concurrent file transfers to ensure productive business communications. FASTCopy SuperServer is designed to meet these exacting requirements, while offering a comprehensive solution for both internal and external corporate connectivity.

SoftLink's high-end unrestricted B2B and B2C solution, FASTCopy SuperServer delivers unrestricted, secure and reliable file transfer between a central server and numerous nodes in a heterogeneous environment. FASTCopy SuperServer enables organizations to transfer and receive files on demand, without limiting the number of clients or concurrent users.

### Unrestricted means NO restrictions. Period.

In this unrestricted FASTCopy SuperServer version, all limitations are lifted.

FASTCopy SuperServer can concurrently handle unlimited numbers of sessions and nodes. File transfers are easily and reliably completed, regardless of the number of files, the size of files or which operating systems the participating nodes are using.

Moreover, with FASTCopy SuperServer both client and server can initiate the file transfer, and activate pre- and post-transfer processing on both source and target machines. In short, FASTCopy SuperServer supports:

- Unlimited number of clients
- Unlimited concurrent sessions
- Pre- and post-transfer processing
- Cross-platform operation Insert space

All this is possible with a single server license, and no additional client fees.

### FASTCopy Reliability and Performance

FASTCopy SuperServer is based on FASTCopy's unique architecture and features, including:

- Guaranteed file delivery
- Bandwidth control
- High-level security and administration features
- SSL cryptography and authentication
- Pre- and post-transfer processing
- Compression & "difference-only transfer" for increased efficiency
- Flexible, centralized monitoring & control
- Cross-platform compatibility
- Easy integration and rapid deployment
- Highly flexible Application Programming Interface (API)
